

aeRos® Test Management Solution

Description

aeRos® is a cloud-based, Workflow and Test Management Solution supporting a range of AFL test equipment including the ROGUE® Modular Test Platform and FOCIS® Flex/Duel Fiber Scopes. With basic and PRO versions available aeRos provides a free and licensed set of features to help streamline test set-up, execution and record keeping. aeRos is designed to bring together planners, project managers and technicians involved in building and testing fibre optic networks. It facilitates two-way communication and data exchange so project managers can send jobs directly to technicians, defining exactly which tests, configurations and criteria are needed. This reduces both set-up time and mistakes in the field, creating real OPEX savings. With aeRos, data is synchronized from ROGUE and FOCIS test equipment automatically, making reporting easier and faster than ever. You'll never again lose data or delay reports, and you can avoid unnecessary truck rolls and costly re-testing by addressing challenges as they arise. That means no more waiting days or repeating tests. Through the aeRos project dashboard, users can monitor the progress of projects and produce reports instantly without delay.

Features and Benefits

- Cloud based system available world-wide through a web browser
- Invite technicians, and send projects directly to aeRos
- Build projects with cable/fiber identification schemes and equipment setups
- Real time results synchronization and progress tracking

- powered equipment
- Centralized results management and report generation in PDF, XLSX, XLS & CSV
- Upload results from non-AFL test equipment and attach project related documents
- Manage software updates to ROGUE Modular Test Platform
- Unlimited data storage and user management with aeRos PRO

Applications

- Supports ROGUE Modular Test Platform and FOCIS Flex/Duel Fiber Scopes
- Optical network testing
